Does A CVE's Description Length Matter?

It's a problem I am working on for an upcoming talk for but here is a peak at the raw data.

The average CVE has had a 43-word description.
1998 averaged the least words per description with 11.
2024 averaged the most words per description with 58.
[Swift.org](#) published the most verbose CVEs with 252 words per description.
[Opencloudos.tech](#) published the least verbose CVEs with 9 words per description.
